

# You want to do your part. We can help.

Our dual-seal system helps Super Spacer® insulating glass units last up to five times longer in durability tests than single-seal units.

Super Spacer® units withstand the 140°F/60°C temperatures, 95 - 100% humidity and constant UV bombardment in the world's toughest durability test—the P-1 chamber.

The all-foam formula of Super Spacer® blocks the heat escape path and provides one of the best thermal performances in the industry.

Our all-foam formula offsets the effects of temperature changes, barometric pressure, wind load and glazing pressure. The end result is less seal failure and fewer stress cracks.

Condensation can lead to more than bacteria and molds. It can increase the likelihood of fungi, viruses and mites that cause respiratory infections, allergies and asthma.

With improved sound absorption over traditional metal spacers, NO-Metal Super Spacer® is a huge help in keeping the decibels down.
